

Daniel Wodesenbet, Ph.D., P.E.

Daniel Woldesenbet is an experienced public sector executive with over 25 years of leadership, professional engineering and management experience. Currently, as the Director of the Alameda County Public Works Agency, he oversees the provision, maintenance and operation of public infrastructure. Daniel also serves as the General Manager of the Alameda County Flood Control and Water Conservation District that manages the District's natural creeks, channels, levees and associated flood control infrastructure. As a champion for sustainability, Daniel has been promoting green practices in the development and implementation of programs and projects. He also leads professional staff that perform tidal and sea level rise studies that are focused on developing safeguards against flooding due to global warming.

Daniel holds Ph.D. in Public Administration, MBA and BS in Civil Engineering, and is a licensed Professional Engineer. Daniel is a member of several professional organizations, and currently serves as the 2012/13 President of the County Engineers Association of California (CEAC), a state-wide association that seeks to inform policy and legislative initiatives, and facilitates the dissemination of innovations and best practices among public works professionals throughout California.
