

Richard Rhoads, P.E.

Principal Engineer, Moffatt & Nichol

Mr. Rhoads has more than 25 years of civil engineering experience acquired on a variety of civil works projects and a diverse range of project management and civil engineering experience with particular emphasis in heavy construction, marine construction and dredging projects. Mr. Rhoads also serves as the Business Unit Leader for the Walnut Creek office in California supervising a staff of fifty civil, coastal, and structural engineers and other technical and administrative staff.

Mr. Rhoads project experience has involved planning, inspection, analysis, evaluation, design, construction document preparation, cost/schedule analyses, and construction management including engineering support during construction and claim preparation/analysis/negotiation. He has also performed air emission estimates for several major marine construction and dredging projects throughout the United States. In particular, he has provided these services for numerous water resources projects involving flood control, levee modification, repair, and construction, water control structures, channel improvements, bank stabilization, erosion control, and wetland restoration.
